

Device description

PX254 driver is designed to control the LEDs. Built-in DMX receiver allows to control 3 DMX channels (R, G, B) directly with the DMX protocol. Wide range of power supply voltage and high current carrying capacity outputs (6A) permit a control of large quantities of LEDs. What is more the PX254 has built-in fuses that can be replaced by the user by himself.

PX254 can be either controlled by DMX, and act independently. In this case, the user is offered a fully programmable scene and 18 pre-programmed sequences, which can also freely change the playback speed and fluidity changes in steps. Thanks to the interpolated resolution of the output control at the 16 bit level, the control of the parameters of individual channels is completely smooth. Driver PX254 can operate in different control modes: **2b** – brightness and one of the 256 colors define by the manufacturer, **3b** – each color RGB can be set separately, **3bd** – each color RGB can be set separately and dimmer (dimming all outputs), **3bS** – each color RGB can be set separately, frequency "strobo" and fill factor, **HSL** – responsible for hue, saturation and lightness, **dW** – dynamic white (tunable white), control channels cold and warm white, **EFF** – it is available on 7 DMX channels and control R, G, B, Mode, Speed, Fade and Brightness.

The driver has a built-in tuning frequency signal system ("*flicker free*" technology), which makes it particularly useful in applications for the television industry. The RGB LEDs often differ quite substantially in parameters, this can cause problems in obtaining a white color (at full power especially). Therefore PX254 comes with a very useful function called "white balance". Thanks to it you can choose color correction for each set of LEDs controlled by the device to achieve at full power the color white.

The PX254 is produced in common anode version – it allows LEDs connection on common anode.

Driver comes in two versions: standard – version controlling LED lamps with a common anode, CC – version controlling LED lamps with a common cathode.

Connection diagram

a) for the PX254 version

Note! The driver PX254 is common anode type device. It is possible to connect lamps with 4-wires cable with a common "+" only.

b) for the PX254-CC version

Note! The driver PX254-CC is common cathode type device. It is possible to connect lamps with 4-wires cable with a common "-" only.

Technical data

type	PX254
DMX channels	512
RDM protocol support	yes
power supply	7 – 24V DC
max. current consumption	18A
power consumption without load	30mA for 12V DC 40mA for 24V DC
output channel number	3
interpolated resolution of output control	16 bit
programmable scenes	1
built-in programs	18
outputs current capacity	6A / channel
output socket	screw connectors
Master mode	yes
weight	0.2kg
dimensions	width: 175mm height: 43,5mm depth: 26mm
