## **Device description**

PX800-C is a professional LED illuminator designed for illumination of museum exhibitions or displays. Thanks to the application of the most modern semiconductor SSL LED light sources and advanced control electronics, a high class illuminator was created which meets very high requirements for museum and exhibition lighting. Its most important advantages include a complete lack of ultraviolet radiation emission, trace amounts of infrared radiation, a very high factor of CRI color capturing, smooth adjustment of color temperature of emitted light, large brightness and small energy consumption. Modern electronics allowed to create a lamp that is devoid of the effect of "light vibration" (*flicker free* technology) in the full control range, which makes it useful in the television industry.

The device has a bracket that allows it to be mounted directly to the ceiling.

Two individual addresses allocated to each lamp allow for independent adjustment of its brightness and color temperature, regardless of the settings of other lamps. Through push buttons located on the lamp casing it is possible to operate it manually.

Highly-effective LEDs made by Osram Oslon<sup>®</sup> are used in the lamp with an efficient control system, through which the lamp emits small amounts heat.

The lamp casing renders it possible to change the direction of its beacon in two axes.

Below is a description of the PX800-C model designations with their explanation:
